VALIDATION TOOL FOR QUALITATIVE RESEARCH INSTRUMENT/ INTERVIEW PROTOCOL

Research Title	"Build-Bot" (B-Bot): Connecting Visual Blocks to Python Syntax through Grid-Based City Simulation
Proponents	Abarca, Junvell Djhong D. Elisan, Andrea Bella R. Gustilo, Daphne Lois B. Malimban, Lindsay Allyson B.
Research Objectives	General Objective: To develop a grid-based city-building simulation that integrates block-based programming with text-based programming and Python syntax that enables automated construction of tasks, which can help aid novice learners in learning basic programming. Specific Objectives: ● To determine the most suitable syllabus that can follow ● To identify the required features and system components for a command-based scripting system in a city-building simulation. ● To develop and implement a script interpreter capable of processing Python-inspired commands for B-Bot. ● To create a functional grid-based city simulation where players can automate construction tasks using scripted commands. ● To implement scripting functions including movement, building, resource gathering, conditions, and loop commands within the B-Bot system.
Target Participants	Beginners, especially first-year (BSIT, BSCS, and BSCpE) college students, senior high school students, and anyone interested in learning basic coding skills.

Dear Validator:

Please evaluate the qualitative research instrument/interview protocol intended for data collection in the abovementioned investigation to help determine its validity. Kindly provide your objective assessment by selecting (/) only one option per criterion from the choices below. Please follow these steps:

1. Carefully read each criterion and its corresponding statements.
2. Evaluate each statement using the provided scale:
   4 = Highly Evident
   3 = Evident
   2 = Somehow Evident
   1 = Not Evident

3. If you believe a question or item needs revision, provide comments or suggestions in the space provided.

Criteria	4	3	2	1
I. Clarity and Coherence				
1. The questions are briefly stated, clearly worded and free of ambiguity.		x		
2. The questions follow a logical flow, from simple to complex types of questions.	x			
3. The questions do not contain double-barreled items (i.e., questions that ask about two different topics simultaneously).		x		
II. Relevance and Alignment				
4. The questions are focused on the issue or topic to be explored.	x			
5. The questions align with the research objectives.	x			
6. The questions are relevant to the participants' experiences or knowledge.	x			
7. The questions are mutually-exclusive or avoid unnecessary or redundant queries.		x		
III. Exploratory and Open-ended Nature				
8. The questions are open-ended to allow for detailed responses.			x	
9. The questions encourage participants to share their perspectives freely.			x	
10. There are follow-up or probing questions to deepen responses.				x
IV. Ethical Considerations and Cultural Sensitivity				
11. The questions respect participant privacy and confidentiality.	x			
12. The questions are free of leading or coercive language.	x			
13. There is a mechanism for obtaining informed consent before the interview.	x			
14. The questions consider cultural and contextual appropriateness.	x			
15. The questions are inclusive and respectful of diverse perspectives.	x			
V. Practicality and Feasibility				
16. The interview can be conducted within a reasonable timeframe.	x			
17. The questions are adaptable to different participants and settings	x			
18. The length of the interview is appropriate for participant engagement and data saturation.	x			
Final Rating (Mean Score)	**3.44**			

Scale Interpretation:
3.26 - 4.00 → **Highly Valid** (no revisions required)
2.51 - 3.25 → **Valid** (minor revisions may be required)
1.76 - 2.50 → **Moderately Valid** (Needs revision based on expert feedback)
1.00 - 1.75 → **Not Valid** (Major and substantial revisions required)

Comments and Suggestions

Question No.	Remarks
Part II (Beginner) Q1	Revise "I'm totally not familiar at all" to "Not familiar at all" for clarity.
Part II (Beginner) Q2	Response options could be arranged from lowest to highest level of understanding.
Part II (Intermediate/Advanced) Q2	"Debugging issues related" appears incomplete and should be revised to "Debugging issues related to loops, functions, or classes."
Part III Q1	Revise to "What device do you mostly use for laboratory work?"
Part IV Q4	Statement is lengthy and may be simplified for easier understanding.
Part V Q2	The scale appears incomplete because option "5" is missing. Ensure the full 5-point Likert scale is provided.
General	Include more open-ended questions if qualitative insights are desired, since most items are closed-ended survey questions.
General	Consider pilot testing the questionnaire with a small group of students before full implementation.
